# 1. Introduction

This manual provides instructions and detailed procedures for installing, operating, maintaining, and troubleshooting about this anti-theft device SportShield from Coris Innovation. Read and undertsand every warning and precaution before using this product.

## 2. Product Overview

### 2.1 Product Information

- Charging port
- Locker
  - outgoing cable
  - input cable
- Buzzer
- NFC (*under the device*)

### 2.2 Intended Use

The SportShield device is able to work in any environment to protect your equipment in public area. It should be able to work equally well in cold and hot environments. It can be in a sleep mode which reduce the battery consumption if the device is not used.

### 2.2.1 Alarm system

- When the device detects slight movements, it produces moderate-level beeps.
- When the device detects a strong shock, it produces a loud alarm.
- When the device is connected by bluetooth or detects a NFC card it plays a sound to confirm it.

### 2.2.2 USB-C charging port

The device can only be charged by a USB-C charger of any power, we recommend charging it from a wall outlet.

**Advice :** For a better battery life, please charge it between 20% and 80%, otherwise this may reduce the battery's effectiveness.

### 2.2.3 Near Field Communication (NFC)

Located at the back of the device, it has a range of 0,5 centimeters and should work with the provided security card.

## 2.2.4 Physical security features

The locker system works with a multi-layered cable which can be adapted as the length you want to secure any equipments. There is an outgoing cable at the right of the device which can be locked at the left side of the device with an electromagnet.

### 3. User Interface Description

#### 3.1 Connection: Instructions for connecting the device to user's equipement

Steps	Instruction	Visual
	<p>You can connect the SportShield device to your phone by Bluetooth or NFC.</p>	
1st way	<p>Bluetooth : you can select manually your device with the Bluetooth option.</p>	
Step 1	<p>After clicking on the Bluetooth option, you just need to scan for your device which must be near for the first connection.</p>	

Steps	Instruction	Visual
Step 2	After scanning it, you need to select your device (your localization must be enabled).	
Step 3	You may need to click a second time on your device to confirm it.	
Step 4	Connect the app to your device, the device will play a very short melody to confirm your connection.	

Steps	Instruction	Visual
Step 5	Result : Now you're connected.	
2nd way	NFC : if your phone is equipped with NFC technology, you can add your device to the app by scanning it closely under the device.	

### 3.2 Security card Setup: Step-by-step for the device for the security card setup and pairing

If your phone is paired with the Mobile App, you can add a security card to the device by following these steps :

1. in the Mobile App, click on the "Add Security Card" button.
2. Present the security card to the device when the Mobile App displays a message that asks you to until it confirms that the security card has been added.

---

## 4. Safety Warning

To avoid any damage or dysfunction of the device, follow these safety warnings : - The device must be used in an environment where the temperature is between -15°C and +45°C - Take care of the charging port which should not be cluttered. - This product has no user-serviceable parts. Do not attempt to repair to avoid permanent damage.

However, the device should be waterproof and robust against break-in attempts.

## 5. Operation Guide

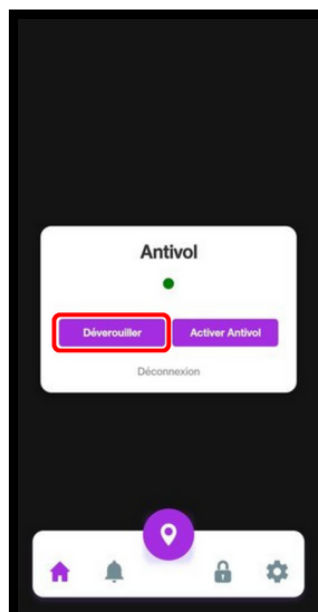

### 5.1 Enabling or disabling the Anti-Theft Protection and unlock the device

#### 5.1.1 Activate and deactivate the Anti-Theft Protection using the Mobile App

In the Mobile App, go on your device and click on the "Activate Anti-Theft Protection" button. The mobile app displays a message to confirm that the anti-theft protection is activated. The same button is changed by "Deactivate Anti-Theft Protection" which disables this protection if it is clicked, the Mobile App displays a message to confirm that the anti-theft protection is deactivated.

To unlock the device, you need to click on the "Unlock" button, which will display a message to confirm that the device is unlocked.

### 5.1.2 Activate and deactivate the Anti-Theft Protection and unlock the device by using the Security Card

Present your security card to the device, it will play a sound to confirm that the anti-theft protection is enabled or disabled. To unlock it, you need to present your security card to the device a second time which will play a different sound.

### 5.2 Location and battery Tracking: Viewing device location and battery via app

You see the GPS coordinates on the map and the battery level inside the Mobile App. (*the device must have battery*) It can send a notification on your phone to prevent you when the battery is low or when it is full.

## 5.3 Cut the Alarm off

### 5.3.1 Cut the Alarm with the Mobile App

If the alarm of the device is activated, you can cut it on the Mobile App with the "Cut Alarm" button, it will displays a message to confirm that the alarm is cut.

### 5.3.2 Cut the Alarm with the Security Card

Present your security card to the device, it will cut the alarm and play a sound to confirm that the alarm is cut.

## 5.4 Sleep Mode Activation: Instructions for conserving battery life

The device will enter in sleep mode to reduce the power consumption, it will enter in this mode when the device is not connected to the mobile app, and when the device is not in anti-theft mode, it will emit a sound when it enters sleep mode.

The device will exit from sleep mode when it is connected to the mobile app or when it is in anti-theft mode.
